DETAILED ACTION

1. Applicant's submission, filed January 10, 2007 has been entered and acknowledged by the examiner.
2. Applicant's arguments, see pages 11,12, filed January 10, 2007, with respect to the rejections of claims 1-22 have been fully considered and are persuasive. The rejections of claims 1-22 have been withdrawn.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 23-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Waymouth (USPN 5079473).

With regard to claim 23,

Waymouth discloses an emitter for light sources, in particular a filament, which can be led to incandescence through the passage of electric current, the emitter comprising at least one of a plurality of nanometric reliefs arranged according to a predefined geometry on a last surface of the emitter, and a plurality of nanometric cavities arranged according to a predefined geometry within the emitter (embodiment 2, columns 5,6). The phrase "obtained with the

Art Unit: 2879

method according to the claim 1" does not structurally distinguish the claimed invention from the prior art, as is required of apparatus claims.

With regard to claim 24,

Waymouth discloses an emitter, wherein said reliefs comprise an antireflection microstructure, in order to maximize electromagnetic emission from emitter into visible spectrum (embodiment 2, columns 5,6).

With regard to claim 25,

Waymouth discloses an emitter, wherein said cavities are part of a photon crystal structure (embodiment 2, columns 5,6).

Claim Rejections - 35 USC § 101

5. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 26-29 provide for the use of anodized porous alumina, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 26-29 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See

Art Unit: 2879

for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Allowable Subject Matter

6. Claims 1-22 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art does not disclose nor make obvious, in addition to the other limitations of the claims, a method of making an electrically conductive incandescence emitter wherein a layer of anodized porous alumina is used as a sacrificial element. Therefore claim 1 is allowed. Claims 2-22 are allowed as a result of their dependence upon claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher M. Raabe whose telephone number is 571-272-8434. The examiner can normally be reached on m-f 7am-3:30pm.
